**CHAPTER  
ONE**

---

**ABOUT**

There are several C++ wrappers for [HDF5](#) C library. One of them is [HighFive](#) project. **h5gt** is created upon it. So the API is pretty similar.

Generally one may prefer using **h5gt** only if python bindings are needed. Otherwise one should consider using [HighFive](#).

Originally the project was started as part of a free and open source geophysical platform [Colada](#).

Also [h5geo](#) project actively uses **h5gt**.

## 1.1 License

Boost Software License 1.0

## BUILD INSTRUCTIONS

### 2.1 Pre-requisites

- CMake
- compiler with C++17 support
- python (optional)

### 2.2 Dependencies

- HDF5
- Eigen (header only, optional)

### 2.3 h5gtpy dependencies

- python
- Eigen (header only, **required**)

### 2.4 Configure & Build

```
git clone https://github.com/tierra-colada/h5gt.git
cd h5gt
mkdir build
cd build
cmake ..
-DH5GT_BUILD_h5gtpy=ON
-DPYTHON_EXECUTABLE=/path/to/python.exe
-DH5GT_USE_EIGEN=ON
-DEigen3_ROOT=/path/to/eigen3
-DHDF5_DIR=/path/to/hdf5-config.cmake
-DHDF5_RUNTIME_DIRS=/path/to/hdf5-runtime
-DZLIB_RUNTIME_DIRS=/path/to/zlib-runtime
-DH5GTPY_COPY_RUNTIME_DEPS=OFF
cmake --build .
```

(continues on next page)

(continued from previous page)

```
# CMake settings
-DCMAKE_BUILD_TYPE=Release
-G "some generator"
cmake --build . --config Release
cmake --install . --prefix /path/to/h5gt-install
```

---

**Note:** If you see that some of the dependencies were not resolved at installation step then change <lib>\_RUNTIME\_DIRS, rerun cmake & cmake install steps.

---

**Warning:** H5GTPY\_COPY\_RUNTIME\_DEPS copies all the resolved runtimes to site-packages/h5gtpy dir. There might be OS-specific runtimes that nobody wants to copy. Thus this option is not recommended yet.

## 2.5 Supported platforms

Windows, Linux, MacOS

---

**CHAPTER  
THREE**

---

**EXAMPLES**

For examples please referer to [src/examples](#).

---

**CHAPTER  
FOUR**

---

**INDICES AND TABLES**

- genindex
- modindex
- search
